

Why Clean Green?

Green cleaning promotes health, safety and social consciousness. Green cleaning is good for the environment. It can help to reduce air pollution, water pollution, ozone depletion and global climate change.

It's also good for business. Commercial green cleaning increases workplace safety, health, productivity, and return on investment (ROI) of facilities.

By using green products and techniques in your facility you can improve indoor air quality and minimize the use of raw materials and toxic products that require disposal.

Green cleaning practices do not expose workers to harmful volatile organic compounds (VOCs) and fluorocarbons that decrease indoor air quality (IAQ). Green cleaning can help reduce the costs to building

management including costs associated with sick leave, health care, and productivity loss.

At Memphis Chemical & Janitorial Supply we offer a host of Green Seal certified cleaning products. Another advantage to commercial green cleaning is the enhancement of the organization's reputation and brand equity because being socially conscious has become a desirable business trait. Green cleaning with Green Seal approved products can earn LEED credits. LEED (Leadership in Energy and Environmental Design) is a series of building ratings developed by the U.S. Green Building Council (USGBC) to provide a standard for what constitutes a "green building" or "high performance" building. There is an effort underway to develop LEED for homes.

Memphis Chemical & Janitorial Supply provides free green cleaning training as well as Green Seal products. To find out more about green cleaning, training and products, contact us at 901-521-1612 or toll-free at 800-561-1612.
